

Endurance Mix

A blend of herbs, vitamins and minerals formulated to nutritionally support endurance in horses competing in highly demanding sports.

Use this if :

you compete in endurance, polo, polocrosse, eventing, show jumping, etc.
And if your horse's energy decreases over time.

Endurance Mix

Endurance Mix contains:

Kelp

Dried seaweed meal is a source of many vitamins, minerals and amino acids.

Full fat soya

Soya is a high protein, high fat feedstuff.

Spirulina

Spirulina is a blue green alga. It is a source of amino acids, proteins, fats, vitamins and co-factors.

Siberian Ginseng

Known as an adaptogen, is widely used in sports supplements for human athletes.

MSM

MSM (Methylsulfonylmethane) helps maintain healthy joints and supports recovery from exercise.

Vitamin B1

Vitamin B1 (Thiamine) is required for the horse's body to manufacture ATP, the body's energy carrying molecule.

L-Lysine

L-Lysine is the 'rate-limiting' essential amino acid. This means it is more likely than any other amino acid to interrupt protein synthesis and thus stop muscle development.

Betaine

Betaine (or Trimethylglycine) is an amino acid used in muscle development.

Vitamin E

Vitamin E works together with Selenium – both are antioxidants. Vitamin E is not synthesized by the horse, so it needs to come from its diet.

Magnesium

Horses deficient in Magnesium can show signs of nervousness, excitability and muscle tremors.

Calcium

Calcium is a mineral which, if deficient, can cause problems such as weak bones and menstrual problems.

Vitamin B12

Vitamin B12 is an essential vitamin which is necessary for the normal function of nerve cells.

Selenium

Selenium is an antioxidant mineral.

Folic acid

Folic acid is essential for (amongst other things) the manufacture of red blood cells.

Endurance Mix

Analytical constituents:

Analytical constituents:

Crude Protein	(%33)
Crude Fibre	(%7.77)
Crude Ash	(%4.7)
Crude Oils and Fats	(%4.87)
Moisture Content	(%11.8)
Sulphur	(%2.76)
L-Lysine	(4000 mg/kg)
Magnesium, organic acid	(20 mg/kg)

Directions:

Maintenance: One scoop per day (15g) mixed into the feed.

Competition: Two scoops per feed in up to 4 feeds per day.

One 500g bag will last one horse four weeks using the maintenance amount.

Please take care:

Not for use in pregnant or lactating mares.

Do not use in conjunction with Digoxin, Ticlopidine or Warfarin.

This is a nutritional product and is not intended as a substitute for veterinary products or advice.

Discontinue immediately at any sign of an adverse reaction.
