KICK-TAPE CAT

How it Works:

Kick TAPE- CAT's active ingredients are praziquantel & pyrantel pamoate, Praziquantel works by damaging the parasite's skin internally, so the parasite disintegrates and is removed by the pet's immune system. Pyrantel pamoate is active against hookworms and ascarids and acts as a blocking agent, causing paralysis. This results in the hookworm losing its grip in the intestinal wall and is removed from the pet's system by natural process.

Cautions:

Side effects are rare, but may include loss of appetite, increased salivation, vomiting and diarrhea. Other side effects may also occur. Talk to your veterinarian about any side effect that seems unusual or bothersome to your pet. Kick TAPE- CAT tablets are not for use in kittens less than one month old or weighing less than 1.5 pounds.

What should I discuss with my Veterinarian before giving Kick TAPE?

Tell your veterinarian if your cat has ever had an allergic reaction to the medication. Tapeworm is a zoonotic infection meaning humans can contract tapeworm from animals. Discuss the importance of maintaining good personal hygiene.

KICK-TAPE CAT

How should Kick TAPE- CAT be given?

Give Kick TAPE- CAT exactly as directed by your veterinarian. If you do not understand the directions, ask the pharmacist or veterinarian to explain them to you. Kick TAPE- CAT is given as a single dose. Store Kick TAPE- CAT at room temperature away from moisture and heat. Keep out of the reach of children and pets.

What should I avoid while giving Kick TAPE- CAT?

Because humans can contract tapeworm from animals, it is important to maintain good personal hygiene. It is also important to eliminate fleas on your pet and in the household and to not feed the pet rodents or uncooked meat or fish. To prevent reinfection, daily clean-up of stools is recommended.

What other drugs will affect Kick TAPE- CAT?

Do not give Kick TAPE- CAT to your cat if already giving an alternate dewormer medication unless directed to by your veterinarian.

The recommended dose rates are 57.5 mg/kg Pyrantel Pamoate and 5 mg/kg Praziquantel. This is equivalent to 1 tablet per 4 kg (9 lbs) bodyweight.

The tablet should be given directly but, if necessary, can be disguised in food. Kick tape Tablets may be given directly by mouth or offered in small amount of food.

Do not withhold food from the cat prior to or after treatment. The tablets are scored into halves to enables a range of weights to be treated.
