

# QuicFIP Plus spot on for Cats

Protect your cat with the #1 name in flea and tick protection. QuicFIP Plus Spot On for flea and tick control for cats and kittens is a long-lasting, fast-acting, waterproof flea and tick treatment proven to kill adult fleas, flea eggs, flea larvae, chewing lice and ticks. This flea and tick treatment kills ticks that may transmit Lyme disease. QuicFIP Plus Spot On for Cats has been trusted by pet owners for over 10 years. This month-long treatment is made for cats eight weeks or older, weighing 1.5 pounds and greater. Made with two active ingredients — fipronil and (S)-Methoprene — this treatment breaks the flea life cycle by killing adult fleas as well as the eggs and larvae and prevents new infestations. One fast-acting topical application protects for a full 30 days.

**Comes in Box 6 Tubes of 0.67ml  
which is Six- month supply**

## QuicFIP Plus spot on for Cats

### Benefits:

- #1 name in flea and tick protection
- Trusted by pet owners for over 10 years.
- Provides fast-acting, long-lasting flea, lice and tick protection.
- Stops existing flea infestations and prevents new infestations.
- For cats 8 weeks or older weighing 1.5 pounds (0.8 kg) or more
- Kills adult fleas, flea eggs, flea larvae, chewing lice, & ticks
- Waterproof
- Easy to apply once a month to protect for a full 30 days.

### How it Works:

One of the Active ingredients Of QuicFIP Plus spot on for Cats - Fipronil is a broad-spectrum insecticide that belongs to the phenylpyrazole chemical family. It disrupts the insect central nervous system by blocking GABA-gated chloride channels and glutamate-gated chloride (GluCl) channels, resulting in central nervous system toxicity.

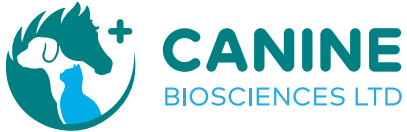

Methoprene is a juvenile hormone (JH) analogue which acts as a growth regulator when used as an insecticide. Juvenile hormone must be absent for a pupa to molt to an adult. Methoprene-treated larvae is unable to successfully change from pupae to adults. This breaks the biological life cycle of the insect, preventing recurring infestation.

Cautions: Your Cat may experience some temporary irritation at the site of application. If signs persist or become severe within a few days of application, consult your veterinarian immediately.

In the event of a QuicFIP Plus overdose:

Contact your veterinarian or veterinary emergency room.

## How to use:

Remove the pipette from its packaging. Hold the pipette in an upright position, twist and pull the cap off.

Turn the cap around and place the other end of the cap back on the pipette. Push and twist the cap to break the seal, then remove the cap from the pipette. Part the coat on the back of the animal at the base of the neck in front of the shoulder blades until the skin is visible. Place the tip of the pipette onto the skin and squeeze the pipette several times to empty its contents completely and directly onto the skin in one spot.

## Active Ingredient

Fipronil	98mg
(S) – Methoprene	118mg

## DOSAGE:

For Cats above 0.8kg: use 0.50 ml Pipet (Comes in Box 6 Tubes of 0.67ml which is Six- month supply).
